Calls whereas in Cloud Computing systems an on-demand network model is used to provide access to shared pool of configurable computing resources.

Cloud Computing vs. Distributed Computing

Distributed cloud computing expands the traditional, large data center-based cloud model to a set of distributed cloud infrastructure components that are geographically dispersed. Distributed cloud computing continues to offer on-demand scaling of computing and storage while moving it closer to where these are needed for improved performance.

What is Distributed Cloud Computing? | StackPath

In the IT world, “distributed” is defined as a resource which is shared among diverse systems, which may also be in different locations. The distributed cloud is the application of cloud computing technologies to connect data and functions which are located in different physical locations. As more tools and innovations become useful for central management, distributed cloud architectures are expected to develop quickly and become the norm for many organizations.
