### **The Engineering Design Process: Specify Requirements**

The engineering design process is a series of steps that guides engineering teams as we solve problems. The design process is iterative, meaning that we repeat the steps as many times as needed, making improvements along the way as we learn from failure and uncover new design possibilities to arrive at great solutions.. Overarching themes of the engineering design process are teamwork and design.

Engineering design is the creative process of identifying needs and then devising a product or a process to fill those needs. After a need has been identified, the purpose of an engineering design project proposal is to succinctly communicate to your audience: Benefits of the product or process to the end customer. Project objectives.
