The volume measurement in the Forex market is looking at how much price moves within a certain period and it does not care how many or few buying and selling transactions are in fact needed to make that price move 1 tick. All it knows is how many ticks it moved, regardless of the fact if 100 trades were involved or 10,000.

Conclusion. Volume-price trend (VPT), sometimes known as price-volume trend, combines price and volume in the market to form a hybrid trading indicator of the two variables. The basic idea behind the indicator is to multiply the market's volume by the percentage change in the price over a given interval (usually daily).
