a repair facility every 15,000 miles to have a trained technician check their fluid. A special tool, Miller part number 9336, is used to check the level, which depends on fluid temperature. Since the fluid level can change almost 12mm from 70°F to 190°F, the level must be checked with the 9336 dipstick and cross-referenced to a chart or table.

The RE0F06A (those are zeros; not the letter O on all models) is one of the earliest and largest design CVTs, with a 5.5:1 ratio. It appeared in Nissans starting as early as 1991 in some countries. The latest design — RE0F11A — is the smallest model, and is used in mini or small vehicles. Most Jatco CVTs are similar

THE WORD ON THE STREET

This issue comes from the RE0F06A and it is typical for JF011. One of the most common reasons for getting into repair services for this transmission is related to the oil pressure shortage connected
