To provide these unique information services, Doody Enterprises has forged successful relationships with more than 250 book publishers in the health sciences ...

Section The Outer Planets Answers

Jupiter and the other planets farthest from the sun are called the outer planets. The first four outer planets—Jupiter, Saturn, Uranus, and Neptune—are much larger and more massive than Earth, and they do not have solid surfaces. Because these four planets are all so large, they are often called the gas giants.

4 The Outer 4 The Outer Planets Planets

The outer planets of the solar system are Jupiter, Saturn, Uranus, and Neptune. Pluto was also included as an outer planet from the time it was discovered in 1930 until being reclassified as a...

The outer planets are - Answers

From left to right, the outer planets are Jupiter, Saturn, Uranus, and Neptune. The gas giants are made up primarily of hydrogen and helium, the same elements that make up most of the Sun. Astronomers think that hydrogen and helium gases comprised much of the solar system when it first formed.
