For example, the luminiferous aether wasn't debunked; it was not needed in the new theories, and so it dropped out of physics, but that's a very different matter. Locke's objection to innate ideas, principles, knowledge, etc., not only wasn't a scientific theory, but isn't touched by genetic theory, or by any scientific theory.

10 Most Famous Scientific Theories That Were Later Debunked

Proponents of labeling theory support the theory's emphasis on the role that the attitudes and reactions of others, not deviant acts per se, have on the development of deviance. Critics of labeling theory indicate that the theory only applies to a small number of deviants, because such people are actually caught and labeled as deviants.

A scientific theory that cannot be evaluated empirically is not a good theory. By definition, a scientific theory is a natural, testable ("falsifiable") explanation of a large body of facts or observations. If a theory cannot be tested, then it cannot be falsified, even if it is indeed false. This isn't just an arbitrary restriction.

Why a theory that cannot be evaluated empirically is not a ...

Theory is constructed of a set of sentences that are entirely true statements about the subject under consideration. However, the truth of any one of these statements is always relative to the whole theory. Therefore, the same statement may be true with respect to one theory, and not true with respect to another.
