Volatility and Correlation: The Perfect Hedger and the Fox ...

Volatility and correlation: it takes two to tango Remember: in finance as in other aspects of life, one risk may be hiding behind another! In recent years, with markets oscillating between phases of complacency and spikes in risk aversion, the focus has often been on the volatility of asset prices and less on their correlation.

1 Correlation is a measurement between -1 and 1, which indicates the linear relationship between two variables. If there is no relationship between two variables, the correlation coefficient is 0. If there is a perfect relationship, the correlation is 1. And if there is a perfect inverse relationship, the correlation is -1.

Nowcasting volatility of financial time series appears difficult with classical volatility models. This paper proposes a simple model, based on an ARMA representation of the log-transformed squared returns, that allows to estimate current volatility, given past and current returns, in a very simple way. The model can be viewed as a degenerate case of the stochastic volatility model with ...

A simple model for now-casting volatility series

Correlation between COVID-19 rates and economic activity vs. volatility. Source: Federal Reserve Bank of Dallas and Federal Reserve Bank of St. Louis, latest data available. A correlation of -1 indicates a perfect, inverse relationship between economic activity (e.g., hours worked, dining traffic, mobility) and new COVID-19 cases.
